

The Sunpork Group / Swickers

Processing facility upgrades and expansion

Swickers Kingaroy Bacon Factory is the fresh pork processing operation of the SunPork Group. This facility is the only export-accredited pork abattoir in Queensland. Their value-add facility at this site is equipped with the latest technology- preparing cooked, smoked and cured products for market, to the highest quality standards.

Swickers identified the need for increased processing capacity to meet their future requirements. Upon review of the existing facility, it was determined extending the existing slaughter floor was not feasible, as it would be too difficult to maintain production during delivery.

-  Advisory services, design and construction

Project scope

Wiley was engaged for the design and construction works and have worked with local suppliers to deliver this 4,700m² project, including:

- Slaughter floor
- Freezer
- Chillers
- Amenities
- Offal rooms

Business value to client

SunPork Group partnered with Wiley to upgrade and expand their processing capacity at their Swickers Kingaroy Bacon factory.

Swickers currently processes over 95% of the pigs processed in Queensland. This expansion allows the broader Queensland pork industry to grow with the increased processing capacity.

As the largest employer in the South Burnett region, this expansion is a significant investment in the community's future.

Wiley collaborated closely with Swickers key stakeholders during the design stage, ensuring the state-of-the-art facility solution is future-proofed. While not required immediately, the new facility is capable of processing at three times the speed and overall volume of the current plant.
